

1st Annual State of Arizona Employee Information Security and Privacy Conference 2008

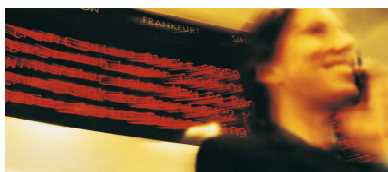

Connect, Engage and Learn!

**ADDRESSING THE SECURITY AND PRIVACY
NEEDS OF CITIZENS, BUSINESSES AND
EMPLOYEES OF THE STATE OF ARIZONA**

Expand your personal network of State peers leading citizen protection, law enforcement, technology advancement, Security and Privacy advocates, government relations, Legislation and Policy mandates.

As the concurrent issues of Security and Privacy become more complex in today's political, economic, and technological environment, State Agencies have more responsibility than ever to protect personal information and infrastructure. Information is one of our most important assets, yet its vulnerability places the State at risk. As stewards in State government, we must enforce policies, practices and technologies to proactively secure and manage both citizen and business confidential information. All State Agencies grapple with privacy and information protection, regardless of location or domain of operations. The impact of the loss of personally identifiable information (PII), trade secrets, intellectual property and sensitive information, can cause emotional distress, erode confidence in government, involve identity theft, and lead to costly damage for individuals, businesses, and the government agencies responsible for safeguarding the information.

As contributors gather to exchange information – Galvanize by connecting, learning, and engaging colleagues entrusted with the State's Security and Privacy.

► ► ► **Conference Fee: Free and Lunch Provided**
